Midterm: Create & Improve a High-Fidelity Design

REVIEW
HISTORY

Meets Specifications

You did a phenomenal job in terms of your submission. Your Figma prototype & frames were neat and professional and I had a great time reviewing your entire project. One can easily see the hard work and efforts you have put in designing this project. Wishing you the best for your future submissions and stay udacious :)

Course 2 User Flows

Provide a PDF of your Course 2 project review along with a link to the User Flow you completed (can add in Submission Details/Notes section, or by providing in your PDF files clearly marked).
You did a nice job in providing both the PDF of the submission and the link to C2 user flow.

UI Design Basics

- Sign up to Mobbin and create a new collection in the "My Collection" tab.
- Search and "Save" the design patterns and elements to your newly created collection.
- Take screenshots of the design patterns and elements in your Mobbin collection and save them in a PDF file.

Excellent job in providing inspirational design screens from mobbin in a well articulated PDF.

- Frame includes a complete list of visual elements including:
    - Typography (sizes, weights, and styles)
    - Colors (How foreground colors and background colors interact)
    - UI Elements and Styles
    - Imagery/Illustrations
    - Icons

This frame is well designed and contains all the required visual elements.

- Frame includes a complete list of components they are going to use to create their Pattern Library, which includes:
    - Buttons
    - Navigation
    - Other elements that might apply (ie. search bars, input fields, lists, dialogs etc.)
- Defined the do's and don'ts of how each element of their design should be used and not used.

As required our frame includes the buttons, input and other elements. The do's and don'ts of this section are well defined and are relevant to the section focusing on button size, color, and shape.
Tip: Check the Apple UI design (https://developer.apple.com/design/tips/) for example of do's and don'ts

- Created Frames for their design in Figma (3-5 screens, suggested sizes; iPhone 8, 375x667; Android 360 x 640), using elements from the Style Guide.
- Created design based on chosen Course 2 User Flows.
- Figma Prototype Link provided: (starts with https://www.figma.com/file/...)

Great job! The frames designed in Figma look clean, sleek, and professional. Also, you have used the elements which you have mentioned in the style guide which fulfills the criteria of the rubric.

Building Interactive Designs

- Linked screens together based on their C2 User Flows.
- Tested the flow making sure the user has a way to get back to the start of the prototype.
- Figma Link provided (starts with https://www.figma.com/proto/...)

Great job! The C2 user flows were linked properly and you have designed the way for the user to get back to the start of the prototype as required.
